- Wireless adaptors and other networking devices

Safend Personal Protector

Personal plug-and-play port protection

Risks to your sensitive data come in many shapes. Sometimes, it's high-powered hackers pounding your firewall. And sometimes, it's as simple as losing your flash drive, stepping away from your computer for coffee, or leaving your laptop unattended in a public place.

The fact is, in the time it takes to make a cup of coffee, your data can easily be downloaded onto an MP3 player, smartphone, or memory stick. "Slurping" programs – easily available to anyone online - can copy an average "My Documents" folder onto a portable storage device in 65 seconds. *Bottom line: The moment you walk away from your machine – it becomes vulnerable to data theft and penetration.*

Plugging the Leak – Simply and Effectively

Based on Safend's award-winning Digital Membrane™ technology – in use by enterprises across the globe, Safend Personal Protector gives you full control over who connects what to your PC and laptop's ports and enables you to protect your critical data from theft, loss or corruption.

Safend Personal Protector prevents unauthorized access to your data via all physical communications ports (USB, FireWire, PCMCIA), blocking any unrecognized device. Once approved and verified by a user-set password, devices operate completely unhindered – enabling you to enjoy the convenience of removable media and other devices, while remaining confident that your data is safe.

For a limited time only

Easy Security Definition

Lightweight and intuitive, Safend Personal Protector cuts through the security jargon, immediately protecting your PC or laptop without complex setup and configuration.

By default, Safend Personal Protector leverages existing Windows security schemes to eliminate all port access, except for devices like your mouse and keyboard.

Your Safend Personal Protector port security policy is built automatically for you. Approved devices (your "whitelist") are added on-the-fly by entering a password, and you can approve devices for one-time or ongoing connection.

Granular Protection

Safend's uniquely granular approach to port security allows you to approve devices based on device type, or even the device's unique serial number (when available). This means that you can approve your devices, while leaving similar devices (like someone else's iPod) blocked.

Completely Tamper-Proof

At the heart of Safend Personal Protector is our hardened and tamper-proof agent that operates at the kernel level of the operating system, and includes redundant, multi-tiered anti-tampering features to guarantee absolute uptime. So no one can turn off, approve devices, or uninstall Safend Personal Protector except you, the computer owner.

About Safend

Safend is a leading provider of innovative endpoint security solutions that protect against corporate data leakage and penetration via physical and wireless ports. Safend's award-winning products, available through resellers worldwide, are deployed by financial institutions, healthcare organizations, government agencies and other security aware and regulations aware individuals and companies across the globe. The privately held company, founded in 2003, is headquartered in Tel Aviv with offices in Philadelphia.

Safend Personal Protector requires password authentication to authorize the use of peripheral devices for either one-time or ongoing connection

Supported Platforms

- Windows XP Professional (SP 0-2)
- Windows XP Home (SP 0-2)
- Windows 2003 Server (SP 0-2)
